Automotive & Transportation Technology Portfolio [SOG_P_ATT] : [Order_SOG_P_ATT]

Opportunity & Vision:

- The ATT Summary – Program & Project Logistics:

The Automotive & Transportation Technology Portfolio is going in a direction of design creativity, high performance innovation and quality, OEM (original equipment manufacturer) and after market aspects including replacement parts that are in demand. Combining integrity and taking pride in one's work with a different economic agenda, dynamic technological and practical advantages are some things to consider and appreciate.

Some of the ventures most interesting are custom automotive design, starting with smaller production runs gearing up to increased production involving aspects found in larger plant operations, with solutions to the most pressing problems encountered by drivers, owner operators, small business enterprise and the logistics industry. Production runs of popular items are also essential to keep the wheels turning. Maintaining high quality production with a made in Canada label at a reasonable cost is a worthwhile ideal, secure supply lines, job creation and less aggravation and annoyance is another one.

Of course, navigating on this type of terrain can be bumpy, but with some basic investment in addition to the already existing expertise in people and industrial infrastructure, and some more specific resources to get production up and running, it is possible to save money, create jobs, enjoy longer lasting quality and be part of a team that helps make it possible.

Remember, that when companies and industries get liquidated, as in poof, no longer around because of offshore production, the expertise and markets remain here. This creates a wide open opportunity for new companies, profit sharing, new jobs and careers and of course the chance for people to exercise their assertive nature and focus on the positive of what they can do today to make progress. This can be done by doing things a little differently.
