

Perspective & Understanding: creative writing might get the point across...

You will most likely find that you as an individual are appreciated and valued in a multitude of ways, from all kinds of people, even though it is not always expressed in a way that you realize. As we each have more useful learning and growth oriented events that we can mine for nuggets of golden character development, precious gems of understanding and insight, crystal clear awareness and complex geometric formations hidden everywhere in sight before our very eyes or buried beneath our feet, having very advanced spiritual and vibratory characteristics that can totally transform our outlook, energy and everyday confidence and happiness, including minerals to make all kinds of creative projects and process possible, we also have trace elements of surprise and little particles and moments of delight that enable exponential possibilities to be created that would otherwise be impossible without. Now, you are valuable if you have read this far and get it, even more so if you continue, as this is more than just a test of your patience, practice drill, or to see if you get annoyed or entertained easily, as this is the real thing, and you will soon see from a more enlightened perspective, deeper understanding, experiencing a more intense realization.

So, we will continue down new territory with a vast and exciting landscape of opportunity and vision, to something we like to do a lot of, and that is to explore and discover. From the perspective of investing, please realize that investing can involve much more than just money, and this enterprise and people who choose to be involved understand that, and may be attracted to it with the “that's amazing and about time someone is doing it” perspective. Our belief is that communities and people can work together to create a quality of life rich in opportunity and experience that is second to none. Investing is one of many possible actions to consider, and out of that, several options in types of investing, all very worthwhile and practical. This project in itself is a massive investment in time and resources.

We have of course all kinds of operating parameters that enhance and augment, provide and generate, secure and manage, protect and maintain, stockpile and deploy, allocate and direct, with entities, combinations, jurisdictions that are useful, simple and comprehensive agreements for basic and extremely advanced programs, memberships, accounts and probably a whole lot more interesting stuff to read that is incredibly relevant, down to earth and “as real as it gets” to everyday people in Canada, unlike anything else, anywhere. Ok, the down to earth part, might be a bit of a stretch, but hey, it's a tough job and somebody has to do it! There is no sign up list as far as we know about yet either, except for CVI-OS 1.0!

Notwithstanding the investment capacity, we have a parallel system that is called contribution opportunities, which is very similar but does not include the complexities, level of documentation and other operating parameters encountered. Lucky for us, this is more great news, which you will not find on television or in the paper. This can be done with fundamental and very powerful private trustee and member/co-trustee provision as provided in the Private Member Agreement, which works at an infinitely perfect level for acquisitions of any type.

Additionally, there are more comprehensive features, capabilities and strategic advantage of the self directed Private Investment Management Account, with corresponding entities, jurisdiction, agreements and all the fantastic things you would normally have if you grew up with that as part of your life or lived on a more advanced planet dedicated to advanced civilization, spiritual growth, peace, harmony, co-operation and building great things together, with the recognition of private property, enhanced free enterprise, a positive faith, strong family values and things like that, or by chance or even destiny you stumbled on life transforming providence that made a series of events possible, almost inevitable and certainly a choice point in an alternate future possible. Your true time line is aligned with your true values and purpose and it is true that the universe knows how to reach you and wake you up! A lot of this is useful, most which we don't really talk about, since nobody reads anything on

the internet, including robots that can talk. That is great since we like to talk about everything and nothing and have nothing to worry about since people who can read, can sometimes read between the lines, even if it is in very fine print, none of which we do here, as everyone is encouraged to read and count or do the math at least for starters. Everything here has been expressly created to fry the most excellent data sniffing algorithms, luckily for us, I can barely spell it, never mind number crunch vast realms of stuff. I don't know how I even got this job, my life was supposed to be simple. Wakey, wakey, are you still listening or rather reading?

All kinds of progress can be made with the right kind of effort, a noble and altruistic group with a network of supportive and positive friends, business associates, mentors and allies. You will find that a life lived with a commitment to the principles of integrity, honesty, co-operation and expressing the best of who you are with your personality, character, brains and brawn is something to be proud of. This is like taking pride in your work, your ability to think, act, or even to "buy, build, save and invest in Made in Canada eh!".

We believe this is a fundamental, essential and practical way of life, beneficial for the entire national and local systems even though in many aspects, it is not so conventional, or based on fear, control, competition, greed, imperialistic domineering, self destruction, unwarranted pollution and destruction of bio-diversity and life itself, multiple forms of genocide and total disregard for living in peaceful co-existence with the natural world and people everywhere, or massive debts, enslavement, exploitation, liquidation of jobs, companies, technology, money, capital and entire industries, not to mention stealing dreams, defrauding people of their future, or even the capacity to build the kind of future we can enjoy and be proud of. It's not all bad, in fact, chances are pretty good that it is not too late to fix it, get involved, make a difference. We can choose to build a heaven on earth or pollute and destroy the heaven already on earth, quite simple really.

Look around with new eyes and ask some hard but easy questions and be honest with it if you dare. Do not expect anyone to do it for you, no one will save us, we must work it out ourselves, working together in a group adds to that capability, many hands make light work, remember. Now is the time for all good men to come to the aid of their country, as the saying goes, this can apply to anyone, although it may have been almost unfathomable (a nautical term) to think that only a nationalist, techno-nationalist or economic nationalist would be the only ones capable of responding to anything here and there like this years ago, or, as some might believe that if you were a real Canadian and cared about the country or at least a part of it, you might do something a little different. Read the label, you have two choices.

Now, as we continue to imagine, dream and work towards everything that is important and true, a necessary and desired part of our universe, knowing what makes it more complete, fulfilling, rewarding and alive is essential. Realize and imagine, that you are living the life you want and that you will never trade it for anything, give it up, sell your self short, or allow yourself to be defrauded from an amazing world of potential possibilities that can be yours by choice and action. Are you interested? Does that appeal to you, is this something that you can work with? Oh yes, an allied force on the battlefield is definitely worth having and keeping, as the value of life sustaining and life transforming elements are incomparable to anything else.

We believe in the possibilities that inspire the imagination, that fuel and energize motivation, action and persistence. You might also find that even though the quest and demand for all kinds of investment, development, resources and especially capable and interested personnel with an almost un-imaginable amount of machinery, equipment and facilities, is essential for greater financial, physical and technological power, more importantly is the vast realm of spiritual power required, vision, leadership, a co-operative spirit in creative free enterprise, proven principles, true values, ethics, conscience and God given inalienable rights.

This is true, however, without forgetting or neglecting the survival qualities of spiritual power, character, altruistic personality and value, as without it, anything we do will amount to nothing in short order, regardless of our impression or idea of “our power”, the bank account, tools, toys or anything else we think is really something. Doing and being the best of who we are.

It always seems to be a good idea to be humble, as can be the case when one thinks of oneself as a piece to the universal puzzle, a tool in the hands of a higher power, a person in the role of service, a trustee of integrity and responsibility that knows without a doubt the position of trust is not something to be taken lightly, abused, mis-used, neglected or wrongly directed, but to fulfill those intentions, not just in word and law, as agreements often emphasize, but also in spirit and deed, in the totality of trust, our understanding of intention, needs, desires, priorities and goals balanced with discipline and the utmost of our individual and collective understanding, responsibility and accountability. It is easier that way, more altruistic and in accordance with karma, personal spiritual evolution and present understanding of how the universe and God works. We are each a work in progress.

We can conceive, acknowledge and accept that, if we fail to learn those lessons, succeed at mission tasking and proceed to the next level, stage, phase and program, we either are doomed to repeat the cycle either now or later, in situations similar or different, with resources more or less, with capacity added or diminished, with ample time provided or not, with extenuating circumstance, demands and urgency that might be a whole lot different then, than they are now, as some often think that the universe moves too slow with our incessant demands, wants, desires and quests, when in reality, it is we who are slow, and with a figure of speech, we need to slow down and look after what is the most important thing today, making changes in our lifestyle, mindstyle, priorities and values, our ways of responding to situations and choosing the values of truth, beauty and goodness, while ever reaching and progressing forward in our eternal goal of knowing, being, doing and experiencing something way beyond our usual everyday concentration of energies with our present ability, awareness and focus, that can all certainly change if we want to.

Now, most likely you would have never guessed in a million years (I relate a lot of things to a million years) that you would read something like this here, I would have never guessed or planned that I would have written that either, however, when we look at the much bigger picture, developing the capacity to communicate, co-operate and build great things together is an excellent way to do all these important things that we really are here for, each of us with our particular purpose and destiny must find out for ourselves. Everyone it is different, but if there is something you like, believe in and identify with, that's is great. Who can tell what possibilities we can create together. This is certainly worthwhile to investigate.

On another side of the coin, you might find that entrepreneurs and small business enterprises do not need to be infinitely perfect to get what they want, that with an industrious work ethic and a creative imagination with a positive, constructive and disciplined outlook that is essential with a supportive and enthusiastic network of people, amazing potential in creating positive and constructive alternate realities is possible and very much desired and appreciated. Time is overdue for the renaissance and establishment of new Canadian century and it is time to consider your role in this development.

Additionally, to other influential considerations in ecological sustainability, environmental impacts, in both making and using the technology and products, we have social, cultural, self-sufficient, community, regional and national development values, vision, consensus of goals, direction, aspiration with corresponding mutual agreement and co-operation of people, resources, idea, energy and enthusiasm, configured in mission tasking and purpose. This is always more to think about, be aware of and plan for accordingly. All part of the process and experience as a means to the end, our success in what we are doing and here for.

A unified and converging perspective that is action oriented by participating members who cheerfully choose to act in a self directed manner relative to their unique individual position, character, personality, valuable contributions and their ability to make a difference is ideally always appreciated and amplified for maximum, optimized and synergistic effect. That takes work, lots of it. (This means that you can sign up, get involved and make a difference!)

Only if you want to and cheerfully choose to be a member of CVI. There is zero pressure, threats, fear, terrorism, small print and hard bargains, bribes, payoffs or anything without civilized character, ethics and integrity. We are not into pollution, poison, corruption, any form of enslavement, exporting money to criminal organizations that are happy to put us out of business, bribe our officials or deal with people who are more than happy to betray Canada and sell us out, with super-imposed trade deals or anything that puts us at a dis-advantage, including all the people who don't really care about our jobs, where things are made or the quality of life for the average person. Our version of success is at a multi-dimensional level. What we do many excellent things in Canada to be more successful. We each have a choice, 24 hours in a day, more options, power and technology than anyone in the history of the world and right now is the only time we have. We know that not making a decision is a decision, as ignorance and negligence just does not cut it anymore. We have a job to do.

It is crucial to understand that technology and product development, job and career opportunities requires considerable resources and co-operative co-creative abilities of a vast array of contributing ingredients, factors, energies and related aspects of influencing reality in the tangible world that we live in. This is what we are doing with the CVI-Options.

The more effective we can organize and operate an efficient program, the more we increase our ability in being, doing and having a system that really works exceptionally well. If we have something missing in the equation, and the equation is designed to solve for a particular need, problem or goal, we need to continue to develop that equation, much like mathematical and high end computational equations that we really like to wrap our neurons around in holographic and mental space. We simply recalibrate, adjust and fine tune as we go.

Everyone, as far as we know, has at least one particular gift, talent, ability, understanding, energy, capacity, experience that really sets them apart, or is a definite asset, as some form of excellence resides in all of us, we only need to direct it in positive constructive channel and make the world a better place, everyone can contribute to the equation and by doing that we really can build great things together. So when you come across the question, "What will you do to change it?" you will most likely have a really good idea as you already are, poof!

So now, we hope that we have some perspective and understanding to work with. It is a lot, but it is essential in order for us to continue to go forward and advance in our relationships and build that quality of life that we envision in that alternate future reality we like to dream and talk about so much, right now and today, there is no time or life like it.
